Claytone® HT **Rheological Additive**

General Description:

Claytone HT is a modified montmorillonite designed for use in systems containing aromatic and aliphatic solvents that display low to medium polarity. Claytone HT demonstrates high gelling efficiency, reproducible viscosity and thixotropic development, a high degree of sag control and prevents hard settling of pigments and fillers. Claytone HT is a high performance rheological additive for use in high performance oil based paints and is especially suited to industrial, marine and maintenance coatings.

Typical Physical Properties:

Color: Very Light Cream
Form: Finely Divided Powder
Specific Gravity: 1.7
Weight/Gallon: 14.2 lbs/ US gallon
Bulk Density, lbs/ft³: 34
Dry Sieve Size (%-200 M) : 95%
Moisture Content: 2.0%
Weight Loss @ 1000EC: 38.5%

The above typical values are not intended as product specifications.

Applications:

- High performance coatings
- Lubricating greases
- Inks
- Adhesives
- Caulks and sealants
- Cosmetics and personal care
