Claytone® SO

General Description:

Claytone SO is a modified montmorillonite specifically designed for use in silicone oil-based systems.

Typical Properties:

Color: Light Cream

Form: Divided Powder

Dry Sieve Size (-30 mesh): 90%

Moisture Content: 2%

Weight Loss @ 1000°C: 38.5%

The above typical values are not intended as product specifications.

Uses and Advantages:

- Claytone SO provides superior viscosity build and suspension control and prevents separation of solids from silicone oils.
- Claytone SO has proven to be a reliable and reproducible rheological additive for use in a variety of silicone oil based systems including:
 - Antiperspirants
 - Cosmetics
 - Sunscreen
 - Aftershave
